

Error Log Entry

What error message did you encounter (if any)?

I had two public classes from when I copied my code and when I created my file.

What unexpected behaviour did your program exhibit?

My code had errors

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

Include a screenshot of specific lines of code.

Copying a code that already existed

```
1 import java.util.Scanner;
2
3 public class IsoTriangle {
4
5
6 public class IsoTriangle {
7
8
9     /**
10      * Prints a specified number of spaces.
11      * @param count The number of spaces to print.
```

How did you fix the issue?

I look at my public classes to see if I had another class

Provide the corrected code or solution using a screenshot

```
20
21 import java.util.Scanner;
22
23 public class IsoTriangle {
24
25
26     /**
27      * Prints a specified number of spaces.
28      * @param count The number of spaces to print.
29      */
30     public static void addSpaces(int count) {
31         for (int i = 0; i < count; i++) {
32             System.out.print(" ");
33         }
34     }
}
```
